* Additional Features are highlighted in green

1. Security PIC: Jennie Kim • Roles: Admin & Member • Login & Logout • Password Hashing • Password Recovery (Email) • Login Blocking • Captcha 2. Admin & Member Maintenance PIC: Jennie Kim • Admin Account Maintenance (CRUD) • Member Account Maintenance (CRUD) • AJAX Searching, Sorting and Paging • Block & Unblock Account • Member Registration • Email Verification (OTP) • Profile Photo Upload • Profile Photo Resizing & Cropping • Advance Photo Processing (e.g. Rotate) • Webcam Photo Capture 3. Category & Product Maintenance PIC: Kim Jisoo • Category Maintenance (CRUD) • Product Maintenance (CRUD) • AJAX Searching, Sorting and Paging • Product Photo Upload • Product Photo Resizing & Cropping • Advance Photo Processing (e.g. Rotate) • Webcam Photo Capture • Multiple Photos Upload • Drag-and-Drop Photos Upload • Product Stock Update 4. Product Catalog PIC: Kim Jisoo • Product Listing & Detail • Product Filtering (Category & Price Range) • Top Selling Products • AJAX Searching, Sorting and Paging • QR Code (Scan to Search Product)	5. Shopping Cart PIC: Lalisa Manoban • Shopping Cart (Add Item) • Shopping Cart (Update or Remove Item) • QR Code (Scan to Add Item) • AJAX Integration • Product Stock Checking • Wish List (Add Item) • Wish List (Remove Item) • Wish List (Transfer to Shopping Cart) 6. Ordering & Payment PIC: Lalisa Manoban • Checkout (Add Order) • Shipping Address (Add and Manage) • Payment (Stripe API) • Email Notification (E-Receipt) • SMS Notification (Order Created) • Product Stock Deduction 7. Ordering Maintenance (Admin) PIC: Roseanne Park • Order Listing & Detail • Order Filtering (Status) • Order Status Update • AJAX Searching, Sorting and Paging • SMS Notification (Status Updated) • Charts (Sale Reports) 8. Ordering History (Member) PIC: Roseanne Park • Order Listing & Detail • Order Filtering (Status) • Order Cancellation • AJAX Searching, Sorting and Paging • SMS Notification (Order Cancelled) • Charts (Purchase Reports) 9. Others PIC: Lalisa Manoban • Customer Support (Real-Time Chat) • Google Maps (Store Location) PIC: Roseanne Park • Product Review and Rating • Reward Point Handling
--	--

1. System Modules Outline

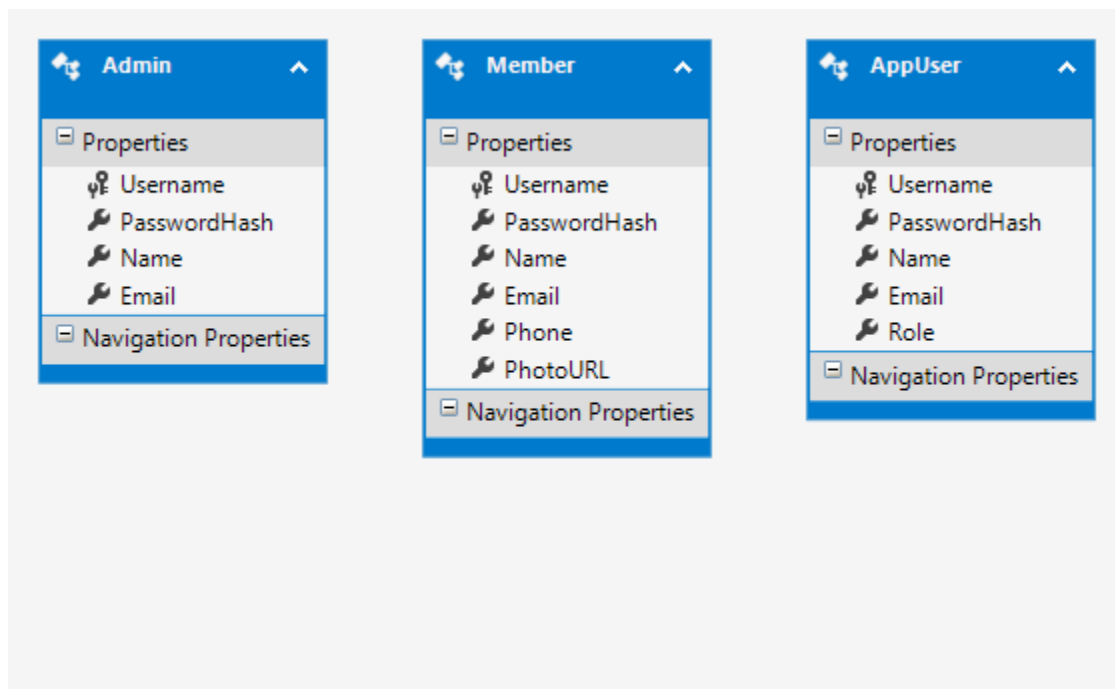

* Additional Features are highlighted in green

1. Security PIC: Lim Chee Luo • Roles: Admin, Teacher, Student • Login & Logout • Role-based authorization and access control • Cookie-based authentication (manual implementation) • Session timeout handling • Account lockout after more than 3 failed login attempts • Input validation (client-side & server-side) • Password Hashing 2. Admin Module PIC: Lim Chee Luo 2.1 Teacher Management • Create, update and suspend teacher accounts • Activate and deactivate teacher (send email) • Assign teacher to subject area • AJAX filtering and searching • AJAX activating and deactivating • Bulk filtering 2.2 Student Management • Supervise student accounts • Activate and deactivate student (send email) • View enrollment • View transaction • AJAX filtering and searching • AJAX activation and deactivation • Bulk activating and deactivating 2.3 Category Management • Category maintenance (CRUD) • AJAX filtering and searching 2.4 Course Management • Approve or reject teacher-created courses • Publish / unpublish courses • AJAX filtering and searching • Course statistic (bar chart) 2.5 Admin Dashboard • Total number of teachers • Total number of students • Total number of courses • Total number of new students (7 days) • Enrollment statistics (bar chart) • AuditLog (AJAX filtering) • View role and permissions	5. Enrollment Module PIC: Divyadarshini A/P Ramasamy • Enroll student into selected course • Store enrollment date • Prevent access to course content unless enrolled 6. Assessment Module PIC: Liew Shan Yi • Teacher creates assessments • Student attempts assessments • Store student answers • Record assessment attempts 7. Auto-Grading Module PIC: Yap Yee Xian • Retrieve correct answers • Compare student answers with correct options • Calculate final score • Determine pass or fail status • Store grading results • Update student progress • Automatically trigger certificate generation upon passing 8. Certificate Module PIC: Pan Jia Hang • Generate unique certificate ID • Generate certificate in PDF format • Include: • Student name • Course title • Score • Completion date • Unique certificate number • QR code generation for certificate verification • Save certificate records • Certificate download page • Certificate verification page 9. File Management Module PIC: ? • Store file paths in database • Secure storage for uploaded files • Access control:
--	---

2.6 System Configuration • Certificate template management • SMTP and notification email settings • Platform branding settings 2.7 Promo Codes • Create and manage promo codes • AJAX searching and filtering • AJAX activating and deactivating 3. Teacher Module PIC: Liew Shan Yi 3.1 Teacher Dashboard • View courses created • View enrolled students • View assessment statistic 3.2 Course Management • Create new course • Assign category (based on teacher subject) • Add course description, thumbnail and difficulty level • Upload course materials: • PDF documents • Videos (file upload or embedded links) • Text lessons • Coding examples • Save course as draft • Submit course for admin approval 3.3 Assessment Management • Create assessments for courses • Add MCQ questions and options • Set correct answers • Set passing marks • Edit and delete questions • Publish assessments 4. Student Module PIC: Divyadarshini A/P Ramasamy 4.1 Student Account • Student registration • Login and logout • Forgot password • Reset password (token based) 4.2 Course Browsing & Enrollment • Browse course catalog • View course details and syllabus • Course enrollment with payment requirement • View enrolled courses in “My Courses” 4.3 Learning & Assessment • Access course content (restricted to enrolled students)	• Teachers can manage their own course files • Students can only access enrolled course materials 10. Notification Module PIC: ? • Email notification for password reset • In-app notification for assessment results and certificate availability 11. Dashboard & Analytics Module PIC: ? • Admin dashboard analytics: • Course popularity • Enrollment statistics • Pass / fail overview • Teacher dashboard analytics: • Student progress • Assessment performance
--	---

● View videos, notes and downloadable materials ● Attempt assessments ● View assessment results 4.4 Certificate Access ● View earned certificates ● Download certificate PDF	
---	--

2. Entity Class Diagram

3. Monetization Models

(A) License and Subscription-Based Model

The support-based monetization model is added as another revenue stream for the online e-learning portal. Basic technical support is available to all users. This model provides paid premium support for institutional clients and professional instructors who need more help, customization, and reliability.

Organizations that license or subscribe to the platform can select the Premium Support Package at RM1,500 per year. This package includes priority technical support, faster responses, system training, course setup help, and troubleshooting for administrative or reporting features. For corporate or educational institutions needing custom solutions, additional services like system configuration, advanced analytics, or staff training workshops are available for a one-time fee.

Individual instructors can choose the Instructor Support Plan at RM300 per year. This plan gives priority help with course publishing, multimedia content management, and performance analytics. It helps instructors manage their courses efficiently and provides the platform with extra revenue.

If 8 institutional clients subscribe to the Premium Support Package, the platform earns about RM12,000 per year ($8 \times \text{RM}1,500$). If 20 instructors choose the Instructor Support Plan, this adds RM6,000 per year.

(B) Advertising

One way to earn revenue for the online e-learning portal is the advertising-based revenue model. In this model, the platform makes money by showing advertisements to users while they access free learning content. This keeps the system accessible to users who do not subscribe or pay fees.

Advertisements are mainly shown to free-tier users, while subscribed users can use the platform ad-free. The platform shows banner ads, sidebar ads, and sponsored course promotions related to education, software tools, certifications, and career development services. Ads are limited and reviewed to avoid interrupting the learning process.

Advertising clients, such as training providers, software companies, and education service providers, are charged using cost-per-impression (CPM) and cost-per-click (CPC) models. For example, banner ads cost RM10 per 1,000 impressions, and sponsored links cost RM1 per click. This method is simple and works for businesses of different sizes.

If the platform has 1,000 active free users and generates 20,000 ad impressions per month, the CPM revenue would be about RM200 per month. If sponsored ads get around 300 clicks per month, the CPC revenue adds RM300 per month. The total estimated advertising revenue would be around RM500 per month or RM6,000 per year.

(C) Course Publishing Fees (Instructor-Based Model)

Instructors who want to publish courses on the online e-learning portal are charged a course publishing fee or a commission on paid enrollments. This helps keep content quality and gives the platform a source of income.

The first method is the Course Publishing Fee. It costs RM150 for each course. This fee pays for course review, content approval, platform hosting, and basic support. Instructors pay this fee only when they publish a new course.

The second method is Revenue Sharing. The platform takes 20% commission from each paid enrollment. The rest of the money goes to the instructor. This lets instructors earn more if their courses are popular.

If 300 new courses are published each year, the monthly income from publishing fees is about RM3,750 ($300 \times \text{RM}150 \div 12$). Revenue from commissions grows as more students enroll in paid courses.

(D) Support Model

The support-based monetization model is added as another revenue stream to help the online e-learning portal. Basic technical support is given to all users. This model offers paid premium support mainly for institutional clients and professional instructors who need more help, customization, and reliability.

Organizations that license or subscribe to the platform can choose a Premium Support Package at RM1,500 per year. This package gives priority technical support, faster responses, system training, help with course setup, and troubleshooting for administrative or reporting features. For corporate or educational institutions needing custom solutions, extra services such as system configuration, advanced analytics, or staff training workshops are available at a one-time fee.

Individual instructors can also choose an Instructor Support Plan at RM300 per year. This plan offers priority help for course publishing, multimedia content management, and performance analytics. It helps instructors manage their courses efficiently and gives the platform extra revenue.

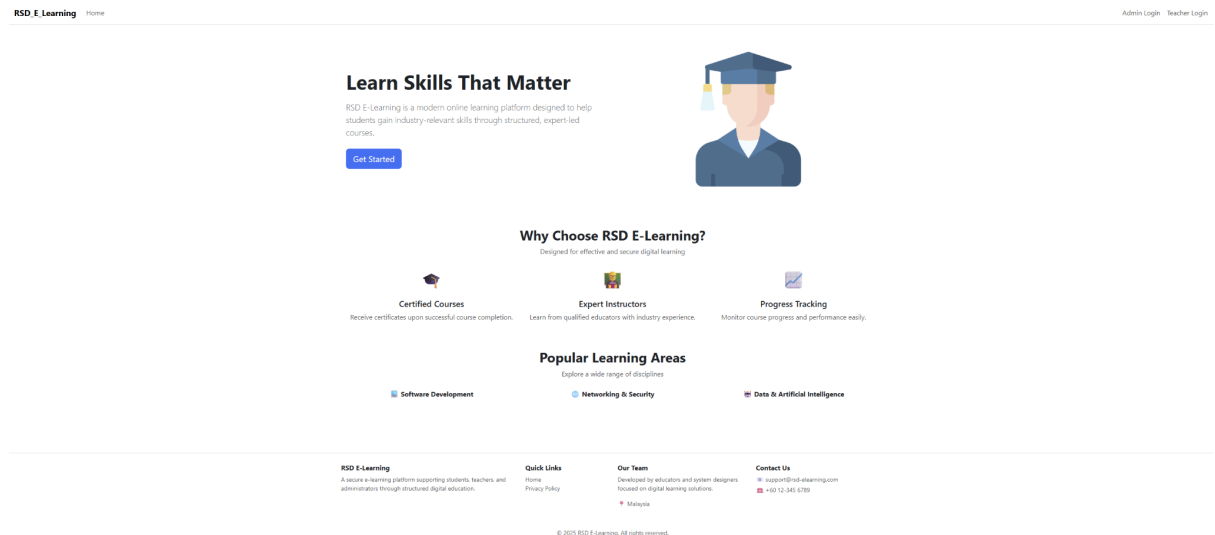

If 8 institutional clients subscribe to the Premium Support Package, the platform earns about RM12,000 per year ($8 \times \text{RM}1,500$). If 20 instructors choose the Instructor Support Plan, this adds RM6,000 per year.

4.1 Admin Module

4.1.1 Admin Login Page

First, the system will show the homepage to the users. For administrators, they can log in to the system via the 'Admin Login' at the top right navigation bar.

Administrator Login

Email Address

admin@elearning.com

Password

☐ RememberMe

Login

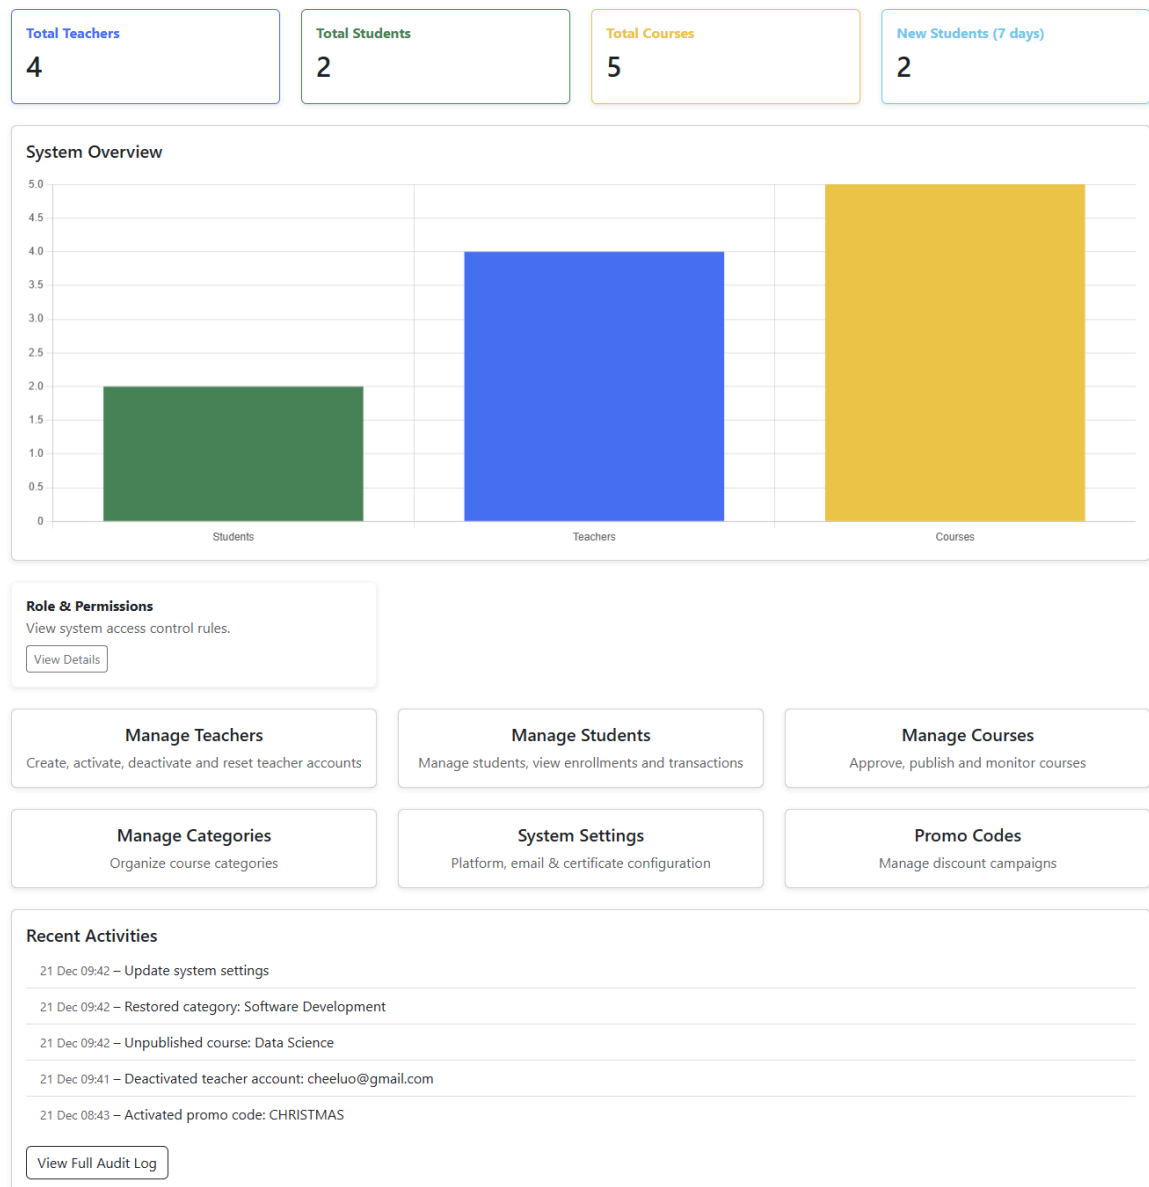

Authorized personnel only

After clicking the 'Admin Login', it will direct the user to the administrator login page. Administrators have to enter their email address and password in order to log in to the system.

4.1.2 Admin Dashboard Page

Admin Dashboard

Last updated: 21 Dec 2025, 09:48

After logging in, the first thing in the admin dashboard is the summary of the total number of students, teachers, courses as well as the summary of new students added within 7 days. This section also includes a bar chart providing the system overview, showing the number of students, teachers and courses. Additionally, there is a role and permission that allows the administrator to view role and permission settings. After that, there is some management such as teacher management, student management, course management, category management, systems setting management and promo code management. Lastly, there is also an audit log that shows the administrator’s recent activities.

Role & Permission Settings

Admin

- Manage system settings
- Approve or reject courses
- Manage teachers and students
- View reports and statistics

Teacher

- Create courses
- Upload learning materials
- Create assessments

Student

- Enroll in courses
- Access learning materials
- Download certificates

← Back to Dashboard

When the administrator clicks the ‘view details’ of the role and permissions settings in the dashboard, the system will display this information in order to let the administrator know the system’s role and permission settings.

System Audit Log

← Back to Dashboard

If the administrator wants to view the full audit log, the administrator can click the ‘view full audit log’ on the dashboard, then they will be directed to this page which shows the full recent activities of the administrator.

4.1.3 Teachers Management Page

Manage Teachers

[+ Add Teacher](#)

[Apply](#)

Name	Email	Subject Area	Status	Action
Chee Luo	cheeluo@gmail.com	Internet Security	Active	Reset Password Deactivate
Default Teacher	teacher@elearning.com		Active	Reset Password Deactivate
haha	haha@gmail.com	Web and Mobile System	Inactive	Reset Password Activate

[← Back to Dashboard](#)

When the administrator clicks 'manage teachers' at the dashboard, then this page is displayed. This page shows the teachers created including their name, email, subject area and status. In this page, the administrator can create, activate and deactivate the teachers as well as reset the teacher password. When the administrator deactivates or activates the teacher, the teacher will receive email for notification. The administrator can also search teachers by email or name as well as filter by status and subjects at the same time. It uses AJAX searching, filtering, activating and deactivating which support partial page reload.

Create Teacher Account

Full Name

Email

Password

Subject Area

[Create Teacher](#) [Cancel](#)

This page allows the administrator to create a teacher account when they click add teacher. The administrator has to enter teacher details such as full name, email and password as well as assign a subject area to the teacher. After successfully creating the teacher account, it will display a message to inform the administrator that the account has been created.

Reset Teacher Password

NewPassword

ConfirmPassword

[← Back](#) [Reset Password](#)

This is the reset teacher password page which allows the administrator to reset the teacher password if necessary. The administrator needs to enter a new password and confirm the password to reset the password for the particular teacher.

4.1.4 Students Management Page

Manage Students

Search Status

☐	Name	Email	Status	Action
☐	Ivya	ivya@gmail.com	Active	Deactivate
☐	limcl	limcl-wp23@student.tarc.edu.my	Active	Deactivate

When the administrator clicks ‘manage students’, the system directs them to this page. In this page, it shows the students that have been registered with their name, email and status. The administrator can search students by name or email and also filter students by status. This page also uses AJAX searching, filtering, activating and deactivating which support partial page reload. Additionally, the administrator can select the multiple students for activation or deactivation. The students will receive email when they have been activated or deactivated. Besides, the administrator can view enrollment and transactions of the student as well if clicks ‘view enrollment’ and ‘view transaction’.

4.1.5 Enrollment Management Page

Enrollment Management

Student	Course	Enrolled At	Payment Status
Ivya	Internet Security	20 Dec 2025	Paid
limcl	Internet Security	20 Dec 2025	Paid
limcl	Wen and Mobile System	20 Dec 2025	Paid

The student enrollment will be shown on this page, including their name, course enrolled, enrollment date and the payment status. AJAX searching and filtering are implemented in this page as well.

4.1.6 Transaction Management Page

Transaction Management

Filter by Course Start Date End Date

Student	Email	Course	Amount (RM)	Method	Status	Paid At
Ivya	ivya@gmail.com	Internet Security	275.00	FakeGateway	Paid	20 Dec 2025
limcl	limcl-wp23@student.tarc.edu.my	Internet Security	275.00	FakeGateway	Paid	20 Dec 2025
limcl	limcl-wp23@student.tarc.edu.my	Wen and Mobile System	250.00	FakeGateway	Paid	20 Dec 2025

This page will show the transaction details of the students that can be viewed by the administrator, including their name, email, course, amount of payment, payment method, status and the payment date. The administrator can filter by course, start date and end date with partial page reload because the AJAX filtering is implemented.

4.1.7 Course Management Page

Manage Courses

Search Status

4.2 Teacher Module

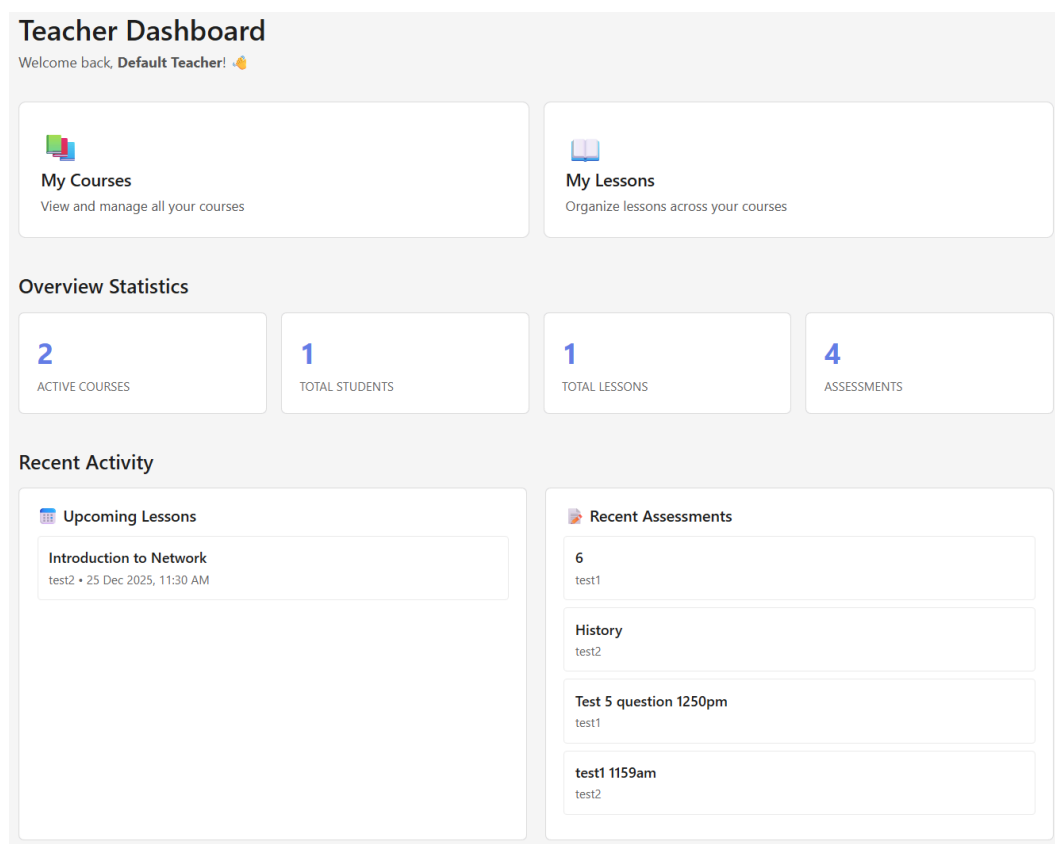

4.2.1 Teacher Login Page

The Teacher Login page features a blue header with the title "Teacher Login". Below the header, there are two input fields: "Email Address" with the value "teacher@elearning.com" and "Password" with the placeholder "Minimum 6 characters". A checkbox labeled "RememberMe" is positioned below the password field. A blue "Login" button is located at the bottom of the form. At the very bottom, a link "Student ? [Login here](#)" is displayed.

This page allows teachers to log in by entering their email address and password to access the e-learning platform.

4.2.2 Teacher Dashboard Page

The Teacher Dashboard page displays a comprehensive overview of a teacher's activities. At the top, it says "Teacher Dashboard" and "Welcome back, Default Teacher!". The dashboard is divided into several sections:

- My Courses:** View and manage all your courses.
- My Lessons:** Organize lessons across your courses.
- Overview Statistics:** A row of four cards showing:
 - 2 ACTIVE COURSES
 - 1 TOTAL STUDENTS
 - 1 TOTAL LESSONS
 - 4 ASSESSMENTS
- Recent Activity:**
 - Upcoming Lessons:** A list showing "Introduction to Network" on "test2" at "25 Dec 2025, 11:30 AM".
 - Recent Assessments:** A list showing "6 test1", "History test2", "Test 5 question 1250pm test1", and "test1 1159am test2".

This page displays the teacher's dashboard showing an overview of their courses, lessons, and student activity, including active courses, total students, lessons, and assessments.

4.3.1 Student Registration

This page allows the students to register .

Learn Skills That Matter

RSD E-Learning is a modern online learning platform designed to help students gain industry-relevant skills through structured, expert-led courses.

Get Started

Why Choose RSD E-Learning?

Designed for effective and secure digital learning

Certified Courses

Receive certificates upon successful course completion.

Expert Instructors

Learn from qualified educators with industry experience.

Progress Tracking

Monitor course progress and performance easily.

Popular Learning Areas

Explore a wide range of disciplines

Software Development

Networking & Security

Data & Artificial Intelligence

No pending Final Exams

🌟 Study Tips

- Always remember: There is no end towards learning.
- Complete lessons before attempting assessments.
- Don't play while studying, bad habit #1.
- Don't cheat on tests, bad habit #2.
- Revise regularly instead of last-minute studying.

4.3.3 Browse Course page

All the available latest course would be displayed under browse course

Browse Courses

Software Development

Covers programming, application development, and software engineering concepts.

[View Courses](#)**Networking & Security**

Focuses on computer networks, cybersecurity fundamentals, and system protection.

[View Courses](#)**Data & AI**

Includes data analysis, machine learning, and artificial intelligence topics.

[View Courses](#)

Once student click into the course , they will be able to see the currently available courses under this category

Courses in this Category

Select a course to view details.

Data Science

Data science is often described as a multidisciplinary field because it draws on techniques from diverse areas

Instructor: Default Teacher

Category: Data & AI

[View Details](#)

4.3.4 Course Details

Students can click view details in order to view the number of lessons offered and get some insights about it
